

Amendments to the Specification:

Please amend the specification as follows:

Please amend the title to read: "A METHOD AND APPARATUS FOR DATA TRANSMISSION TO REMOTE DEVICES"

Please replace the paragraph on page 18, starting at line 19 and ending at line 28 with the following rewritten paragraph:

The code shown in the appendices is written in XML (eXtensible Mark-up Language), and XSL (eXtensible Stylesheet Language), but could be equally stored using other mark-up languages or as a database. XML requires pairs of tags, or identifiers, to be placed within a document. These tags do not specify how the information should be presented, but specify the content of the information between the pairs of tags. The skilled person will fully understand XML, but a full description can be found on the World Wide Web Consortium – Web Standards web site at <http://www.w3.org>, and the brief description below will aid his/her understanding. An archive of this site may be found using, for example, the Internet Archive Wayback Machine. at http://web.archive.org/web/*/http://www.w3.org ~~which also contains information about XML.~~
